

Kahlil Calavas

From prototype to place.

TECHNOLOGY, ARCHITECTURE & COLLABORATION

AWE / THE TRACES BOOTH / JUNE 2025

Printed structures. Spatial tools.
Ideas tested together.

12 selected moments / 2023–2026

Future Lens

A record of building

From a printed dome prototype to immersive tools for real places.
The thread is practical: make it, test it, and build with others.

01 15 AUG 2023

Printing the possibility

07 6 OCT 2025

See it before building it

02 29 JAN 2024

More than a hack

12 24 SEP 2026

Tools for spatial creation

Dates generally mark publication, not the day an event occurred. Exceptions are labeled.
Sources, video links, and image credits are collected on page 9.

Learning by making

Physical experiments and the people who make them possible.

Video still · 00:18

15 AUG 2023

Printing the possibility

EcoDome journey · Modular prototypes

Prototyping printed dome components with Joe LaRose and Spaceship Earth Engineers. Small physical models make it possible to test shapes, materials, and assembly before attempting a full-size structure.

29 JAN 2024

More than a hack

MIT Reality Hack 2024 · Cambridge

A return to MIT Reality Hack, where immersive technology is built through hands-on collaboration. The recap reflects on a third visit to the hackathon and the exchange between participants, mentors, and organizers.

[Watch original video](#)

A working environment

Space to develop ideas, compare approaches, and put them to the test.

24 FEB 2025

A base for the work

Catskills incubator · New York

A Catskills home base becomes a place for collaborators to develop bioregional software and spatial ideas. The incubator announcement sets out plans for a nearby farm, makerspace, and a larger setting for shared technical work.

[Watch original video](#)

25 MAR 2025

The accelerator in practice

Immersion workshop · The Catskills

An immersion brings entrepreneurial ideas into a working session: planning, presenting, comparing approaches, and making room for invention. The emphasis is on the conditions that help collaborators turn an idea into something they can test.

Archive date

Ideas meet users at AWE

Augmented World Expo · The Traces booth

At AWE, the Traces booth brings headset demonstrations into a busy public setting. It is a practical meeting point for spatial technology, physical interaction, and conversations with the people trying the work.

15 JUL 2025

A wider stage for spatial ideas

UN STI Forum side event · New York

Presenting The Spatial Network at a side event of the United Nations Science, Technology and Innovation Forum. The work enters a wider discussion about technology, collaboration, and the practical systems that connect people and places.

From model to building

Using visualization and modular systems to understand what comes next.

Architectural visualization · Video still at 00:08; black bars cropped

6 OCT 2025

See it before building it

EcoDome journey · Architectural visualization

The dome journey moves from physical prototypes to immersive planning. This EcoTerra demonstration places a dome design in a virtual setting, exploring how mixed reality can help people understand a proposal before construction begins.

3 DEC 2025

Learning how systems go together

Biotekt South · Modular architecture

Exploring an architectural system from inside the structure. The visit considers modular assembly and how a digital planning tool could let people configure a layout, understand its parts, and move toward a build.

[Watch original video](#)

Technology with a purpose

An experimental mindset, applied to concrete projects.

Video still · 00:30

22 JAN 2026

Back at Reality Hack

MIT Reality Hack 2026 · Cambridge

Another chapter at MIT Reality Hack: a meeting of XR builders, hardware experiments, and rapid prototypes. A humanoid robot demonstration captures the hands-on curiosity that runs through the hackathon environment.

Fundraiser post

A digital twin with a purpose

Alan Day Community Garden · Norway, Maine

The garden's digital twin was created to support its fundraising efforts. The captured site makes a real place accessible in 3D; the "Light the Garden" fundraiser video shows the people and activity that the work was intended to support.

Putting the pieces together

Architectural models, immersive tools, and the people developing them.

22 AUG 2026

Event date

Future Lab, in the room

Future Lab · Big Hollow Greene

Presentations, working sessions, and live demonstrations bring the projects into one room. The Future Lab and accelerator recap connects architectural models, immersive tools, and creative hardware through the people developing them.

24 SEP 2026

Tools for spatial creation

Future Lens · CMS, VR & computer vision

Connecting immersive work to a content management system and computer vision makes spatial creation more practical. A virtual sculpture beside a real porch shows the tools moving from technical development into direct creative use.

Dates are Facebook publication dates except the AWE archive date and Future Lab event date. The garden entry dates the fundraiser post; the model view is current and does not establish when the twin was created. Original videos may require Facebook or Drive access.
