

Kahlil Calavas

From prototype to place.

TECHNOLOGY, ARCHITECTURE & COLLABORATION

AWE / THE TRACES BOOTH / JUNE 2025

Printed structures. Spatial tools.
Ideas tested together.

14 selected moments / 2023–2026

Future Lens

A record of building

From printed architectural prototypes to immersive tools and stories.
The thread is practical: make it, test it, and build with others.

Dates generally mark publication, not the day an event occurred. Exceptions are labeled.
Sources, video links, and image credits are collected on page 10.

Learning by making

Physical experiments and the people who make them possible.

Video still · 00:18

15 AUG 2023

3D printed buckyball

Joe LaRose · Spaceship Earth Engineers

Joe LaRose's 3D printed buckyball explores modular construction through physical prototypes. The small model makes it possible to examine shapes, materials, and assembly before attempting a full-size structure.

29 JAN 2024

More than a hack

MIT Reality Hack 2024 · Cambridge

A return to MIT Reality Hack, where immersive technology is built through hands-on collaboration. The recap reflects on a third visit to the hackathon and the exchange between participants, mentors, and organizers.

[Watch original video](#)

A working environment

Space to develop ideas, compare approaches, and put them to the test.

24 FEB 2025

A base for the work

Catskills incubator · New York

A Catskills home base becomes a place for collaborators to develop bioregional software and spatial ideas. The incubator announcement sets out plans for a nearby farm, makerspace, and a larger setting for shared technical work.

25 MAR 2025

The accelerator in practice

Immersion workshop · The Catskills

An immersion brings entrepreneurial ideas into a working session: planning, presenting, comparing approaches, and making room for invention. The emphasis is on the conditions that help collaborators turn an idea into something they can test.

Ideas meet users at AWE

Augmented World Expo · The Traces booth

At AWE, the Traces booth brings headset demonstrations into a busy public setting. It is a practical meeting point for spatial technology, physical interaction, and conversations with the people trying the work.

15 JUL 2025

A wider stage for spatial ideas

UN STI Forum side event · New York

Presenting The Spatial Network at a side event of the United Nations Science, Technology and Innovation Forum. The work enters a wider discussion about technology, collaboration, and the practical systems that connect people and places.

From model to building

Using visualization and modular systems to understand what comes next.

Architectural visualization · Video still at 00:08; black bars cropped

6 OCT 2025

See it before building it

EcoTerra · Architectural visualization

This EcoTerra demonstration places a dome design in a virtual setting. Mixed reality lets people explore a proposed layout and understand its scale before construction begins.

3 DEC 2025

Learning how systems go together

Biotekt South · Modular architecture

Exploring an architectural system from inside the structure. The visit considers modular assembly and how a digital planning tool could let people configure a layout, understand its parts, and move toward a build.

[Watch original video](#)

Exploring possibilities

From hands-on XR experiments to an architectural proposal.

Video still · 00:30

22 JAN 2026

Back at Reality Hack

MIT Reality Hack 2026 · Cambridge

Another chapter at MIT Reality Hack: a meeting of XR builders, hardware experiments, and rapid prototypes. A humanoid robot demonstration captures the hands-on curiosity that runs through the hackathon environment.

30 JAN 2026

Model catalog date

EcoDome

Architectural design · The Futurist Network

A central dome, surrounding rooms, and planted roof surfaces come together in the EcoDome proposal. The architectural visualization and structural model offer two ways to examine the layout and explore how its spaces fit together.

22 JUN 2026

Fundraiser post

A digital twin with a purpose

Alan Day Community Garden · Norway, Maine

The garden's digital twin was created to support its fundraising efforts. The captured site makes a real place accessible in 3D; the "Light the Garden" fundraiser video shows the people and activity that the work was intended to support.

Boxboi — The Green Timeline, official pilot · Animation still at 00:10

4 JUL 2026

Story publication

Boxboi: The Green Timeline

Official pilot · Boxboi chronicles

Boxboi brings the spatial work into an animated story. The official pilot moves between a futuristic city and a wooded setting, using characters and virtual environments to give the world a narrative form.

24 SEP 2026

Tools for spatial creation

Future Lens · CMS, VR & computer vision

Connecting immersive work to a content management system and computer vision makes spatial creation more practical. A virtual sculpture beside a real porch shows the tools moving from technical development into direct creative use.
